

SKILLS

- Java, Spring Boot, Microservices, Distributed Systems, REST APIs, Event-Driven Architecture, Kafka, IBM MQ, Redis, Redis Pub/Sub, Temporal, Elasticsearch, AWS, Docker, OAuth 2.0, OpenID, System Design, Multithreading, SQL/NoSQL, CI/CD, GitLab, Jenkins, Python, RDBMS, Caching, Scalability, Observability

EXPERIENCE

Solution Engineer Backend – Trust and Identity - LinkedIn (Horizontal Talent) Oct 2024 - Present

- Lead onboarding & enablement for LinkedIn's "Verified on LinkedIn" APIs, supporting integrations with Adobe, Perplexity, G2, & PeerSpot.
- Designed and supported scalable OAuth 2.0 (2-legged and 3-legged) authentication flows, OpenID Connect integrations, API permissioning, and validation status APIs for high-scale identity verification systems.
- Acted as the primary technical counterpart for enterprise partners during API integrations, troubleshooting authentication flows, redirect handling, rate limiting, production onboarding, and API adoption challenges.
- Architected a scalable Data Freshness framework enabling partners to validate and refresh LinkedIn verification data at scale while improving API efficiency, reliability, and data consistency.
- Collaborated cross-functionally with Product, Engineering, Mobile (Android), and Developer Relations teams to improve onboarding workflows, verification redirect experiences, and partner integration success.
- Contributed to backend Java services, API scalability reviews, and distributed integration workflows while aligning with LinkedIn engineering best practices for reliability and platform resilience.
- Monitored API adoption, onboarding health, integration issues, & rate limits metrics to improve developer experience & platform reliability.

Axial L3 - Lead Developer - Nomura Services India Private Limited - Mumbai Oct 2022 – Sep 2024

- Designed and developed multi-threaded distributed services for replaying failed trade events from DLQ pipelines, improving resiliency and recovery for high-volume trade processing systems.
- Architected and enhanced trade processing systems by developing a multi-threaded replay service for DLQ-to-amend queue recovery, improving processing robustness and reliability.
- Implemented centralized observability and trade search capabilities using Elasticsearch, Logstash, and Kibana (ELK Stack) for high-volume trade processing systems, enabling faster failure analysis, replay tracking, operational monitoring, and real-time debugging across distributed microservices.
- Implemented Redis caching & Redis Pub/Sub optimizations to improve throughput by 50% while maintaining low-latency trade processing.
- Designed fault-tolerant backend workflows with retry, replay, and asynchronous processing strategies for mission-critical financial systems.
- Led backend modernization focused on scalability, resiliency, async processing & systems reliability across trade processing platforms.
- Automated CI/CD and health checks, including Docker daemon monitoring (Unix + Autosys), reducing release time and improving uptime.

Axial L3 - Senior Developer - Nomura Services India Private Limited – Mumbai May 2017 - Oct 202

- Developed **RESTful APIs with Spring Boot**, ensuring smooth integration with external services.
- Deployed and monitored microservices-based applications in AWS using EC2, S3, CloudWatch, and RDS.
- Optimized the response time of APIs from ~500 ms to ~50 ms by making effective usage of Caching for static data using Redis Cache.
- Developed Python automation scripts using Pandas, Matplotlib, and Autosys/Cron for ServiceNow reporting, monitoring, and maintenance.
- Worked with a tech stack including Java, Spring Boot, Jenkins, Gitlab Ci/CD, Docker, Python, Pandas, Git, Autosys, Shell Scripting.

Genzyme- Sanofi | Associate Software Engineer - Cognizant Technology Solution - Mumbai Nov 2011 - May 2017

- Utilized Java expertise to implement core concepts, OOP, and multithreading, ensuring efficient backend development.
- Streamlined unit testing at Sanofi, enhancing code coverage by 20% through optimized, quality-driven test case development.
- Implemented automated handling for 60% of user queries, significantly reducing manual intervention and improving operational efficiency. Scheduled and carry out Monthly and ad-hoc Data Server refresh as requested by stakeholders.
- Increased code coverage by writing clean, optimized code, and maintained cognitive complexity by following lint rules.
- Developed an interactive UI for viewing specific tables, created a tool for executing SQL queries across multiple databases with consolidated reporting, and implemented user tracking for query execution.
- Adhered to Agile principles by conducting bi-weekly sprint planning, weekly Catch-ups retrospectives, and daily stand-ups
- Automated the process of handling 60% of user queries, RCA, L3-production support, ITIL processes, ITSM, and ServiceNow.

PROJECTS

Ecommerce project URL: <https://bit.ly/ProductServiceSpring>

- Scale and Performance: Designed to handle a catalog of over 1 million products with a peak load of 5000 transactions per second.
- Technologies: Leveraged Kafka for real-time order processing, achieving instant notification and processing. Used Spring Cloud for seamless microservices communication, enhancing fault tolerance and resilience.

EDUCATION

National Institute of Technology, Agartala
BE/B.Tech | 7 CGPA | Mechanical Engineering

2007-2011
